Rigging

Zuckafa is a full facial rig I setup in my Advanced Rigging class. In addition to rigging the entire neck, head, and face, I also setup the control window you see to the right so that the user can have full control over Zuckafa via those controls with no need to touch anything else. All of the controls are parent constrained to the bones in the face, neck, and tongue. While they also drive the 26 blend shapes I created for the various facial expressions.

The model Zuckafa is from the DVD that comes with the book *The Art of Rigging*, from *CG Toolkit*, and written by Kieran Ritchie, Jake Callery, and Karim Biri.
